Wiring: Voltage output 2-wire connection

The following figure shows the block diagram and an example of the terminal assignment of the analog output module AQ 2xU ST on the BaseUnit BU type A0/A1.

- ① 2-wire connection for voltage output
 - ② Backplane bus interface
 - ③ Microcontroller
 - ④ Digital-to-analog converter (DAC)
 - ⑤ Output conditioner
 - ⑥ Color-coded label with color code CC00 (optional)
 - ⑦ Temperature recording for BU type A1 only (function cannot be used for this module)
 - ⑧ Filter connection supply voltage (only when light-colored BaseUnit is present)
- Q_n+ Analog output voltage positive, channel n
 - Q_n- Analog output voltage negative, channel n
 - NC Not connected
 - RES Reserve, must remain unused for future function extensions
 - L+ 24 V DC (infeed only with light-colored BaseUnit)
 - M Ground
 - P1, P2, AUX Internal self-assembling voltage buses
 - Connection to left (dark-colored BaseUnit)
 - Connection to left interrupted (light-colored BaseUnit)
 - DIAG Diagnostics LED (green, red)
 - AQ0, AQ1 Channel status LED (green)
 - PWR Power LED (green)

Image 3-1 Wiring and block diagram for voltage output 2-wire connection

Parameters/address space

4.1 Output ranges

The analog output module AQ 2xU ST has the following output ranges:

Table 4- 1 Output ranges

| Output type | Output ranges | Resolution |
|-------------|---------------|------------------------|
| Voltage | ± 10 V | 16 bits incl. sign |
| | ± 5 V | 15 bits including sign |
| | 0 to 10 V | 15 bits |
| | 1 to 5 V | 13 bits |

The tables of the output ranges, overflow, overrange, etc. can be found in section Representation of analog values (Page 28).

4.2 Parameters

Parameters of the AQ 2xU ST

The effective range of the configurable parameters depends on the type of configuration. The following configurations are possible:

- Central operation with an ET 200SP CPU
- Distributed operation on PROFINET IO in an ET 200SP system
- Distributed operation on PROFIBUS DP in an ET 200SP system

When assigning parameters in the user program, use the "WRREC" instruction to transfer the parameters to the module using the data records; refer to section Parameter assignment and structure of the parameter data record (Page 24).

The following parameter settings are possible:

Table 4- 2 Configurable parameters and their defaults (GSD file)

| Parameters | Range of values | Default | Parameter reassignment in RUN | Effective range with configuration software, e.g. STEP 7 (TIA Portal) | |
|---|---|---------|-------------------------------|---|----------------------|
| | | | | GSD file PROFINET IO | GSD file PROFIBUS DP |
| Diagnostics: No supply voltage L+ | <ul style="list-style-type: none"> • Disable • Enable | Disable | Yes | Module | Module |
| Diagnostics Short-circuit to ground ¹ | <ul style="list-style-type: none"> • Disable • Enable | Disable | Yes | Module | Module |
| Diagnostics: Overflow | <ul style="list-style-type: none"> • Disable • Enable | Disable | Yes | Module | Module ² |
| Diagnostics: Underflow | <ul style="list-style-type: none"> • Disable • Enable | Disable | Yes | Module | |

| Parameters | Range of values | Default | Parameter reassignment in RUN | Effective range with configuration software, e.g. STEP 7 (TIA Portal) | |
|----------------------|---|--|-------------------------------|---|----------------------|
| | | | | GSD file PROFINET IO | GSD file PROFIBUS DP |
| Output type/range | <ul style="list-style-type: none"> Deactivated Voltage +/- 10 V Voltage +/- 5 V Voltage 0..10 V Voltage 1..5 V | Voltage +/- 10 V | Yes | Channel | Channel |
| Reaction to CPU STOP | <ul style="list-style-type: none"> Turn off Keep last value Output substitute value | Turn off | Yes | Channel | Module |
| Substitute value | For permissible substitute values for the various output ranges, see appendix Parameter assignment and structure of the parameter data record (Page 24), Substitute values → Codes for substitute values table | 0 | Yes | Channel | Channel |
| Potential group | <ul style="list-style-type: none"> Use potential group of the left module (module plugged into a dark-colored BaseUnit) Enable new potential group (module plugged into light-colored BaseUnit) | Use potential group of the left module | No | Module | Module |

¹ No diagnostics detection between -0.5 V and +0.5 V (no short-circuit detection)

² Due to the limited number of parameters of a maximum of 244 bytes per ET 200SP station with a PROFIBUS GSD configuration, the parameter assignment options are restricted. If required, you can assign these parameters using data record 128 as described in the "GSD file PROFINET IO" column (see table above). The parameter length of the I/O module is 7 bytes.

Note

Unused channels

A deactivated channel always returns the value "no voltage".

4.4 Address space

Configuration options

The following configurations are possible:

- Configuration 1: Without value status
- Configuration 2: With value status

Evaluating the value status

If you enable the value status for the analog module, an additional byte is occupied in the input address space. Bits 0 and 1 in this byte are assigned to a channel. They provide information about the validity of the analog value.

Bit = 1: There are no errors on the module.

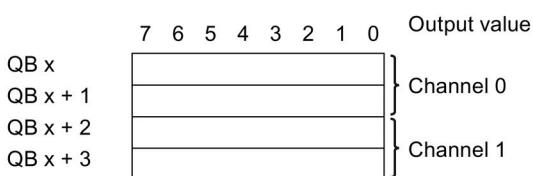

Bit = 0: Channel is deactivated or there is a fault on the module.

If a fault occurs on a channel with this module, the value status for all channels is 0.

Address space

The following figure shows the assignment of the address space for the AQ 2×U ST with value status (Quality Information (QI)). The addresses for the value status are only available if the value status is enabled.

Assignment in the process image output (PIQ)

Assignment in the process image input (PII)

Image 4-1 Address space of the AQ 2×U ST with value status

5

Interrupts/diagnostics alarms

5.1 Status and error display

LED display

The following figure shows you the LED display of the AQ 2xU ST.

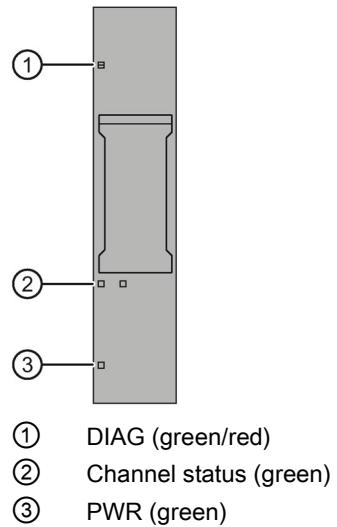

Image 5-1 LED display

Meaning of the LEDs

The following tables show the meaning of the status and error displays. Corrective measures for diagnostics alarms can be found in section Diagnostics alarms (Page 19).

DIAG LED

Table 5- 1 Error display of the DIAG LED

| DIAG LED | Meaning |
|----------|--|
| Off | Backplane bus supply of the ET 200SP not OK |
| Flashes | Module parameters not assigned |
| On | Module parameters assigned and no module diagnostics |
| Flashes | Module parameters assigned and module diagnostics |

Channel status LED

Table 5- 2 Status display of the channel status LED

| Channel status LED | Meaning |
|--------------------|-------------------|
| Off | Channel disabled |
| On | Channel activated |

PWR LED

Table 5- 3 Status display of the PWR LED

| PWR LED | Meaning |
|---------|---------------------------|
| Off | Missing supply voltage L+ |
| On | Supply voltage L+ present |

5.2 Interrupts

The AQ 2xU ST analog output module supports diagnostics interrupts.

Diagnostics interrupts

The module generates a diagnostic interrupt at the following events:

- Short-circuit (voltage)
- High limit violated
- Low limit violated
- Error
- Parameter assignment error
- Supply voltage missing
- Channel temporarily unavailable

5.3 Diagnostics alarms

A diagnostics alarm is generated and the DIAG-LED flashes on the module for each diagnostics event. You can read out the diagnostics alarms, for example, in the diagnostics buffer of the CPU. You can evaluate the error codes with the user program.

Table 5- 4 Diagnostics alarms, their meaning and corrective measures

| Diagnostics alarm | Error code | Meaning | Solution |
|---------------------------------|------------|---|--|
| Short-circuit | 1H | Short-circuit of the actuator supply | Correct the process wiring |
| High limit violated | 7H | The output value specified by the user program exceeds the overrange. | Correct the output value |
| Low limit violated | 8H | The output value specified by the user program is below the underrange. | Correct the output value |
| Error | 9H | Internal module error occurred. | Replace module |
| Parameter assignment error | 10H | <ul style="list-style-type: none"> • The module cannot evaluate parameters for the channel. • Incorrect parameter assignment. | Correct the parameter assignment |
| Supply voltage missing | 11H | Missing or insufficient supply voltage L+ | <ul style="list-style-type: none"> • Check supply voltage L+ on the BaseUnit • Check BaseUnit type |
| Channel temporarily unavailable | 1FH | Firmware update is currently in progress or has been canceled. The module does not output any process or substitute values in this state. | <ul style="list-style-type: none"> • Wait for firmware update • Restart the firmware update |

6

Technical specifications

6.1 Technical specifications

Technical specifications of the AQ 2xU ST

| | 6ES7135-6FB00-0BA1 |
|--|--------------------------------------|
| General information | |
| Product type designation | ET 200SP, AQ 2xU Standard |
| Firmware version | V1.0 |
| Usable BaseUnits | BU type A0, A1 |
| Color code for module-specific color identification label | CC00 |
| Product function | |
| I&M data | Yes; I&M0 to I&M3 |
| Scalable output range | No |
| Engineering with | |
| STEP 7 TIA Portal can be configured/integrated as of version | V13 SP1 / - |
| STEP 7 can be configured/integrated as of version | V5.5 SP3 / - |
| PROFIBUS as of GSD version/GSD revision | GSD revision 5 |
| PROFINET as of GSD version/GSD revision | GSDML V2.3 |
| Operating mode | |
| Oversampling | No |
| MSO | No |
| CiR Configuration in RUN | |
| Configuration in RUN possible | Yes |
| Calibration in RUN possible | No |
| Supply voltage | |
| Rated value (DC) | 24 V |
| Valid range, low limit (DC) | 19.2 V |
| Valid range, high limit (DC) | 28.8 V |
| Polarity reversal protection | Yes |
| Input current | |
| Current consumption, max. | 80 mA |
| Power loss | |
| Power loss, typ. | 1 W |
| Address area | |
| Address space per module | |
| Address space per module, max. | 4 bytes; + 1 byte for QI information |

| | 6ES7135-6FB00-0BA1 |
|--|-----------------------------|
| Analog outputs | |
| Number of analog outputs | 2 |
| Voltage output, short-circuit current, max. | 45 mA |
| Cycle time (all channels), min. | 1 ms |
| Analog output with oversampling | No |
| Output ranges, voltage | |
| 0 to 10 V | Yes; 15 bits |
| 1 V to 5 V | Yes; 13 bits |
| -5 V to +5 V | Yes; 15 bits including sign |
| -10 V to +10 V | Yes; 16 bits incl. sign |
| Connection of actuators | |
| for voltage output two-wire connection | Yes |
| for voltage output four-wire connection | No |
| Load resistance (in nominal range of the output) | |
| For voltage outputs, min. | 2 kΩ |
| For voltage outputs, capacitive load, max. | 1 μF |
| Destruction limit for externally applied voltages and currents | |
| Voltages at the outputs | 30 V |
| Cable length | |
| Shielded, max. | 200 m |
| Analog value generation for the outputs | |
| Oscillation time | |
| For resistive load | 0.1 ms |
| For capacitive load | 1 ms |
| Errors/accuracies | |
| Linearity error (in relation to output range), (+/-) | 0.03% |
| Temperature error (in relation to output range), (+/-) | 0.005%/K |
| Crosstalk between outputs, min. | -50 dB |
| Repeat accuracy in settled state at 25 °C (in relation to output range), (+/-) | 0.05% |
| Operational limit in the entire temperature range | |
| Voltage in relation to output range, (+/-) | 0.5% |
| Current in relation to output range, (+/-) | 0.5% |
| Basic error limit (operational limit at 25 °C) | |
| Voltage in relation to output range, (+/-) | 0.3% |
| Current in relation to output range, (+/-) | 0.3% |
| Isochronous mode | |
| Isochronous mode (application synchronized up to terminal) | No |
| Interrupts/diagnostics/status information | |
| Substitute values can be applied | Yes |

A

Parameter data record

A.1 Dependencies when configuring with GSD file

When configuring the module with a GSD file, remember that the settings of some parameters are dependent on each other.

Configuring with a PROFINET GSD file

The table lists the properties and their dependencies on the output type and output range for PROFINET.

| Output type | Output range | Diagnostics | | | | Reaction to CPU STOP | Substitute value |
|-------------|--------------|----------------------|-------------------------|----------|-----------|----------------------|------------------|
| | | No supply voltage L+ | Short-circuit to ground | Overflow | Underflow | | |
| Deactivated | * | * | * | * | * | * | * |
| Voltage | ±10 V | x | x | x | x | x | x |
| | ±5 V | x | x | x | x | x | x |
| | 0 V to 10 V | x | x | x | x | x | x |
| | 1 V to 5 V | x | x | x | x | x | x |

x = Property is allowed, - = Property is not allowed, * = Property is not relevant

Configuring with a PROFIBUS GSD file

The table lists the properties and their dependencies on the output type and output range for PROFIBUS.

| Output type | Output range | Diagnostics | | | | Reaction to CPU STOP | Substitute value |
|-------------|--------------|----------------------|-------------------------|----------|-----------|----------------------|------------------|
| | | No supply voltage L+ | Short-circuit to ground | Overflow | Underflow | | |
| Deactivated | * | * | * | * | * | * | * |
| Voltage | ±10 V | x | x | x | x | x | x |
| | ±5 V | x | x | x | x | x | x |
| | 0 V to 10 V | x | x | x | x | x | x |
| | 1 V to 5 V | x | x | x | x | x | x |

x = Property is allowed, - = Property is not allowed, * = Property is not relevant

A.2 Parameter assignment and structure of the parameter data record

Parameter assignment in the user program

You can reassign the module parameters in RUN. For example, the voltage or current values of selected channels can be changed in RUN without having an effect on the other channels.

Changing parameters in RUN

The "WRREC" instruction is used to transfer the parameters to the module using data record 128. The parameters set in STEP 7 are not changed in the CPU, which means that the parameters set in STEP 7 will be valid again after a restart.

Output parameter STATUS

If errors occur when transferring parameters with the "WRREC" instruction, the module continues operation with the previous parameter assignment. The STATUS output parameter contains a corresponding error code.

You will find a description of the "WRREC" instruction and the error codes in the STEP 7 online help.

Structure of data record 128

Note

Channel 0 includes the diagnostics enable for the entire module.

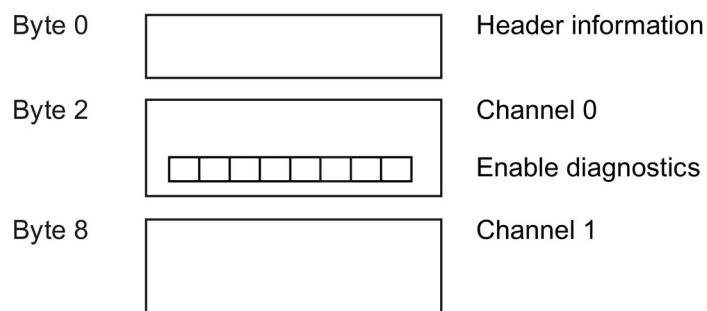

Image A-1 Structure of data record 128

Header information

The figure below shows the structure of the header information.

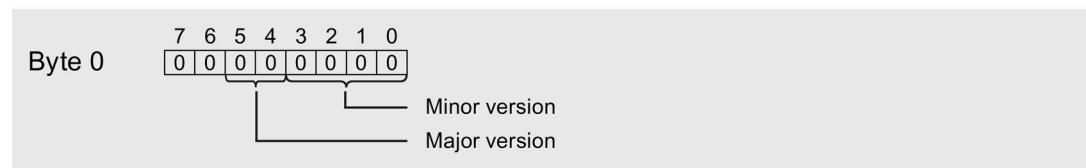

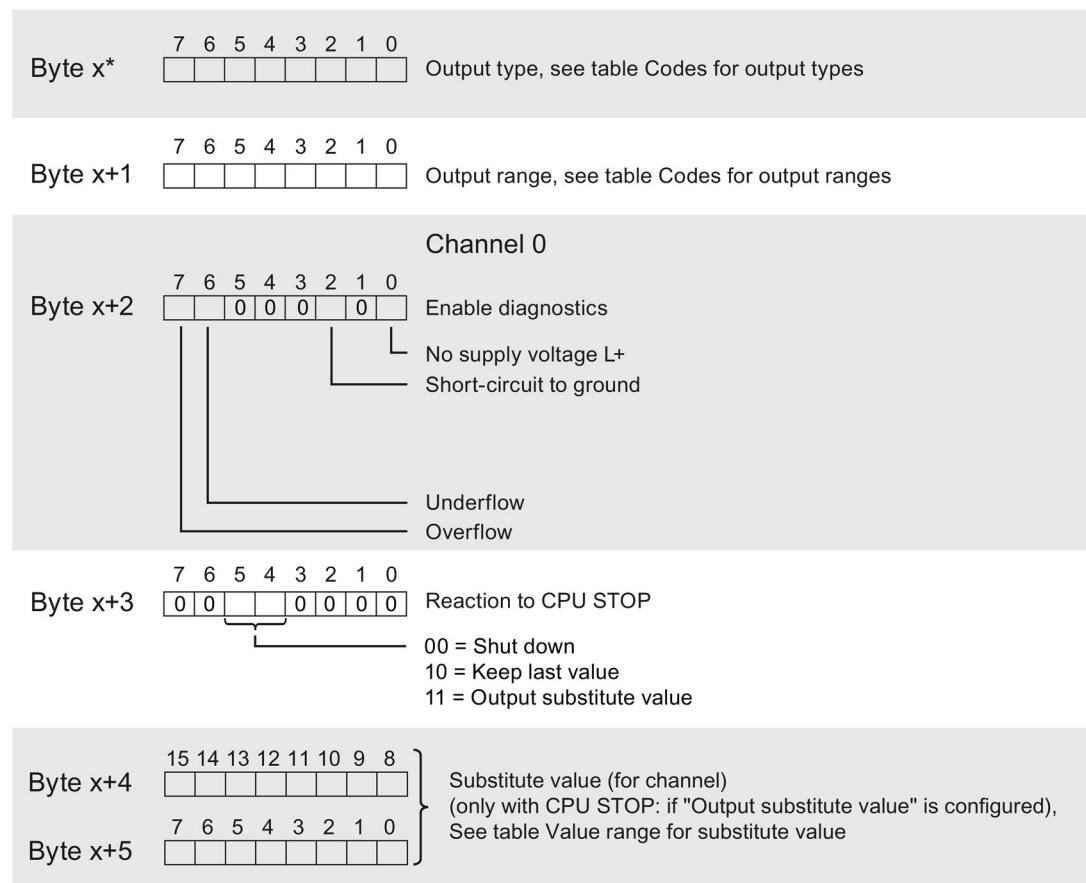

Image A-2 Header information

Parameters

The following figure shows the structure of the parameters for channels 0 and 1.

You enable a parameter by setting the corresponding bit to "1".

* $x = 2 + (\text{channel number} \times 6)$; channel number = 0 and 1

Image A-3 Structure of bytes x to x+5 for channels 0 and 1

Codes for output types

The following table contains the codes for the output types of the analog output module. You enter this coding in byte x (see previous figure).

Table A- 1 Codes for output types

| Output type | Code |
|--------------------|-------------|
| Deactivated | 0000 0000 |
| Voltage | 0000 0001 |

Codes for output ranges

The following table contains the codes for the output ranges of the analog output module. You enter these codes in byte x+1 of data record 128 (see previous figure).

Table A- 2 Codes for output ranges

| Output range | Code |
|---------------------|-------------|
| Voltage | |
| ±10 V | 0000 0000 |
| ±5 V | 0000 0001 |
| 0 to 10 V | 0000 0010 |
| 1 to 5 V | 0000 0011 |

Value range for substitute value

The following table contains the value ranges for the substitute values. You must enter the corresponding codes in bytes x+4 and x+5 (see previous figure).

| Output range | Permissible value range |
|---------------------|--------------------------------|
| Voltage | |
| ±10 V | -32512 to 32511 |
| ±5 V | -32512 to 32511 |
| 0 to 10 V | 0 to 32511 |
| 1 to 5 V | -6912 to 32511 |

Error transmitting the data record

The module always checks all values of the transmitted data record. The module applies the values from the data record only when all values have been transmitted without errors.

The WRREC instruction for writing data records returns the appropriate error codes if there are errors in the STATUS parameter.

The following table shows the module-specific error codes and their meaning for parameter data record 128.

| Error code in the STATUS parameter (hexadecimal) | | | | Meaning | Solution |
|---|--------|--------|--------|--|--|
| Byte 0 | Byte 1 | Byte 2 | Byte 3 | | |
| DF | 80 | B0 | xx | Number of the data record unknown | Enter valid number for data record. |
| DF | 80 | B1 | xx | Length of the data record incorrect | Enter valid value for data record length. |
| DF | 80 | B2 | xx | Slot invalid or unavailable | <ul style="list-style-type: none"> Check the station to determine if the module is plugged in or pulled. Check assigned values for the parameters of the WREC instruction. |
| DF | 80 | I0 | xx | Incorrect version or error in the header information | Correct the version, length and number of parameter blocks. |
| DF | 80 | I1 | xx | Parameter error | Check the parameters of the module. |

Representation of analog values

B

B.1 Representation of analog values

This appendix describes the analog values for all output ranges supported by the AQ 2xU ST analog module.

Measured value resolution

The digitized analog value is the same for all output values at the same nominal range. Analog values are output as fixed point numbers in two's complement.

In the following table, you will find the representation of the binary analog values and the associated decimal or hexadecimal units of the analog values.

The resolutions 13, 14, 15 and 16 bits including sign are shown. Each analog value is entered left aligned into the ACCU. The bits marked with "x" are set to "0".

Table B- 1 Possible resolutions of the analog values

| Resolution in bits | Values | | Analog value | |
|--------------------|---------|----------------|--------------------|-----------------|
| | Decimal | Hexadecimal | High byte | Low byte |
| 13 | 8 | 8 _H | Sign 0 0 0 0 0 0 0 | 0 0 0 0 1 x x x |
| 14 | 4 | 4 _H | Sign 0 0 0 0 0 0 0 | 0 0 0 0 0 1 x x |
| 15 | 2 | 2 _H | Sign 0 0 0 0 0 0 0 | 0 0 0 0 0 0 1 x |
| 16 | 1 | 1 _H | Sign 0 0 0 0 0 0 0 | 0 0 0 0 0 0 0 1 |

B.2 Representation of output ranges

In the following tables, you can find the digitized representation of the bipolar and unipolar range output ranges. The resolution is 16 bits.

Table B- 2 Bipolar output ranges

| Dec. value | Output value in % | Data word | | | | | | | | | | | | | | | | | | Range |
|------------|-------------------|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|---|----------------------|-------|
| | | 2 ¹⁵ | 2 ¹⁴ | 2 ¹³ | 2 ¹² | 2 ¹¹ | 2 ¹⁰ | 2 ⁹ | 2 ⁸ | 2 ⁷ | 2 ⁶ | 2 ⁵ | 2 ⁴ | 2 ³ | 2 ² | 2 ¹ | 2 ⁰ | | | |
| ≥32512 | 117.589 | 0 | 1 | 1 | 1 | 1 | 1 | 1 | 0 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | Maximum output value | |
| 32511 | 117.589 | 0 | 1 | 1 | 1 | 1 | 1 | 1 | 0 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | Overrange | |
| 27649 | 100.004 | 0 | 1 | 1 | 0 | 1 | 1 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 1 | | |
| 27648 | 100.000 | 0 | 1 | 1 | 0 | 1 | 1 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | Nominal range | |
| 1 | 0.003617 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 1 | | |
| 0 | 0.000 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | | |
| -1 | -0.003617 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | | |
